

THE HYGIENE TILE

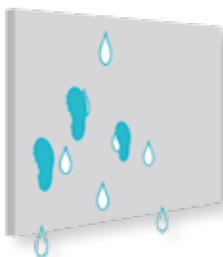

For an effortlessly
perfect home

The hygiene tile for a healthy home

With **Hytect**, allergy sufferers can breathe easily, parents can let their babies crawl along the floor, and animal lovers can easily wipe away any paw prints left by their four-legged friends. After all, this innovative technology reduces bacteria, mould and germs, breaks down pollutants in the air, and ensures that dirt can be easily removed. **Hytect** acts like a natural catalyst whose effects are triggered simply by light – and permanently. **Hytect** is inseparably and durably baked into the tile. For a sustainably good quality of living!

How **Hytect** works

Easy to clean

Thanks to the **Hytect** surface, dirt is simply rinsed off. This reduces the effort involved in cleaning and the use of cleaning agents. Making it possible to concentrate on the good things in life while protecting the environment at the same time.

Antibacterial effect

When **Hytect** interacts with light, oxygen is activated which breaks down microorganisms such as bacteria, mould and germs. The good feeling of having a home which protects us from germs.

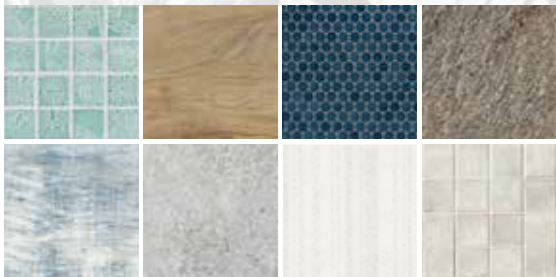

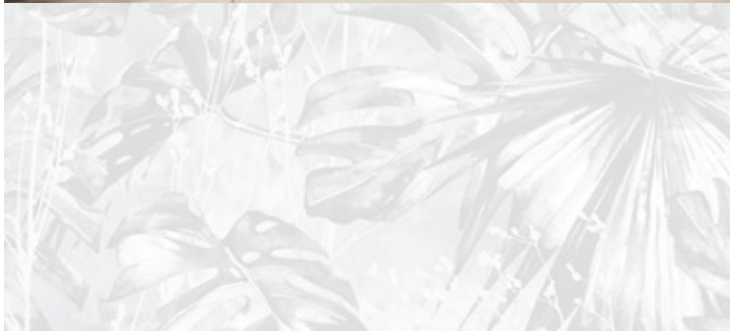

Improved room climate

Hytect triggers an air-purification process which neutralises both unpleasant odours and pollutants such as nitrogen oxides. Enabling every member of the family and guest to your home to breathe easily.

Clever all around

Our homes should be our personal wellness oasis – displaying character, providing security, and being easy to keep attractive and clean without too much effort. **Hytect** tiles make this child's play: making it possible to design an individual favourite place while creating a healthy and comfortable living space at the same time.

The ideal **Hytect** tile for any living style: from mosaics to XXL formats, from purist designs to expressive motifs, from wall tiles to floor tiles. Giving rise to a unique living space entirely in line with your personal tastes.

Living areas

Guests are entertained, children play there, the odd glass is knocked over ... no problem! The **Hytect** surface means that dirt and liquids can be simply wiped away. But these tiles not only facilitate our everyday household chores – they also help us to enjoy more regenerative sleep as they filter pollutants out of the air. **Hytect** – effective both day and night!

Bathrooms

Although so much water, soap and shampoo flows in the shower or bath, our bathrooms are not intended to be sterile wet rooms. **Hytect** tiles withstand water as a wet element, are easy to clean, as well as being effective against bacteria, mould and fungi. Thanks to their attractive and contemporary design, there is nothing “wet” about them at all! Wellness comparable to a private spa!

SUSTAINABLE ADVANTAGES

- Effortless cleaning, saving time and cleaning agents
- Antibacterial, for hygienic cleanliness
- Pure air, for a positive impact on the indoor climate
- Clever technology, for optimum living quality

Hytect means less cleaning, more hygiene, fresher air, and maximum comfort. For an entrance area which is always inviting, a living area which always looks respectable, a bathroom which is a germ-free wellness temple, and a bedroom which is a comforting rest area. The smart way to live.
