

**For future
classics**

Area Pro: comes naturally

Just as the best design objects offer an intuitive understanding of how to use them, the Area Pro series also comes naturally. With its earthy colors and pleasant tactility, the wide range of ceramic products offered by Area Pro immediately spurs ideas on how to use them.

The Area Pro series, which is inspired by fine-grained, layered limestone, blends in and stands out. This makes these tiles and accessories reliable go-to products in nearly every circumstance. Even if they are still new, they emanate their potential to become a future classic.

In that sense, Area Pro's tiles can be seen as the ceramic equivalents of little black dresses and white shirts. Like these fashion mainstays, the range offers an impeccable look in every setting of work, home or leisure.

All tiles are non-directional, which adds to their versatility, along with their diversity of formats and tones. Moreover, all colors in the new series are coordinated with AGROB BUCHTAL's ChromaPlural range, allowing for all kinds of mixes and matches. What's more, it always remains possible to create bespoke projects as well.

Just as fashion standards like the black dress and white shirt are ultimately as good as their fabrics and tailoring, the quality of ceramic porcelain stoneware and earthenware tiles is determined by their technical excellence. AGROB BUCHTAL has a strong focus on technology and innovation. A case in point is its Hytect technology, which protects ceramic surfaces from bacteria and mould, neutralizes pollutants and odours, and is used in nearly all products manufactured by AGROB BUCHTAL.

In collaboration with Sebastian Herkner, a special anti-slip surface pattern has been developed for Area Pro: The Grid. Herkner is a German designer whose projects range from furniture and lamps to rugs and tableware, and who is at ease with a wide variety of materials, such as glass, wood, ceramic, recycled plastic and esparto grass. Sophisticatedly understated, Area Pro is comfortably at home in every setting. It is hard to imagine any occasion where the ceramic would be either too much or not enough.

Every design process requires architects to simultaneously address a multitude of often contradictory questions. When it comes to tiles, Area Pro is an excellent answer. The series is available in many different sizes, and with the right technical specifications for a variety of applications in residential, hospitality and commercial projects.

Standard excellence

Sand, stone, and a bit of spice

The twelve colors of the Area Pro series take inspiration from the earthy tones of sand, clay and basalt, complemented by the dark brown of nutmeg and the softness of platinumum.

The range of black, greys, browns and beiges offers a Pallet of hues which can be combined with each other and especially with the color spectrum of ChromaPlural, the comprehensive unicolored tile collection from AGROB BUCHTAL. Area Pro has a diversity of surface finishes, each maintaining the aesthetic appearance of the ceramic porcelain stoneware and earthenware.

Designing the Grid

Design luminary Sebastian Herkner worked with AGROB BUCHTAL on the development of the anti-slip surface which has been dubbed the Grid. He talks about this collaboration and explains what fascinated him about this project.

"I was very pleased when AGROB BUCHTAL approached me to design an anti-slip pattern for them", says Sebastian Herkner. "These tiles are to be used in very utilitarian settings and I found it an amazing opportunity to work on a design which will bring functionality and beauty into areas where aesthetics is not necessarily a first consideration."

As design writer Martina Metzner has observed, Herkner "pairs an unconditional love for traditional craftsmanship with a good feel for new technologies". To this could be added that he also balances the local with the global. Herkner: "I am here in Offenbach, a relatively small city close to Frankfurt, but it is one of the most international places in Germany. It is an arrival city, where you can find a diversity of cultures and cuisines. I am very curious. I travel a lot for inspiration but I can also encounter the new and the unknown here."

"At the same time", Herkner continues, "I appreciate Offenbach for its local traditions. The city used to have an extensive leather industry which disappeared only recently. The craftsmanship connected with the production of leather goods in this region is important for me as a designer. I see it as a form of sustainability to keep such traditions alive."

Many regions historically have their own craft specialty, related to particular materials. I find it fascinating to build upon them.

While working with AGROB BUCHTAL, a brand which emphasizes both tradition and innovation, Herkner saw another aspect of sustainability: "The stone-like print of the Area Pro is a marvellous asset of these tiles. It makes them an alternative to the natural stone which people often want. Given the relatively short lifespan of most interiors and even buildings, it is much better not to use real stone for say, an industrial kitchen or the flooring of a department store." Whereas many of Sebastian Herkner Studio's other projects have a striking presence, he truly enjoyed working on something less notable. Herkner: "It was certainly different to designing an iconic armchair but for me, a project always begins similarly, with a visit to the company, to get to know the people, to understand what they are making, and to take a look behind the scenes. I found it super fascinating to design an anti-slip pattern for a tile. Perhaps it is not an obvious design assignment but it is very important."

Herkner continues: "I had designed tiles before, for a small company in Bavaria that used to make stove tiles, but this was a completely different job, because the patterned tile is a mass product. No matter what, every design begins with a white piece of paper, and what I was looking for was a pattern that is spontaneous and has a logic. That led to this repetition of trapezium-shaped rectangles and this pattern that can be continued in all four directions. For me, it was a bit like textile design but it had to be very functional obviously and meet very exact specifications. I had to revisit my high school mathematics for this grid, to determine the depth of the relief and the size of the 'hills'. This design was a combination of creativity and physics."

For Herkner, collaboration with AGROB BUCHTAL on the grid for the Area Pro tiles was rewarding. "In our work, you achieve the best results when you approach a design project with an open eye and unconditional curiosity. I love the diversity of projects we have been able to work on in the past 13 years. For us, every product we design supports the next one. From every project, we learn something which we can use in another."

Smart features

The Area Pro series comprises several special features, such as ceramic shower trays and sinks, a very thin wall tile and ceramic channel covers for pool gutters.

The accessories and special elements allow for consistent and unified visual aesthetics in every circumstance. They have several innovative characteristics and options which make Area Pro products the logical choice in a broad array of situations where tiles are used.

For every work environment, public space and leisure place imaginable architects can find in the Area Pro series what they need to realize their creative ideas. For AGROB BUCHTAL, this is the essence of Area Pro: not only providing the inspiration to spark designers' imagination, but also giving them the tools and means to achieve what they have in mind in the best possible way.

Always perfect grip

Area Pro offers multiple slip-resistant surfaces, including the Grid, which comes with a non-slip grade of R12V4. None of the slip-resistant surfaces affect the tiles visually. Area Pro's non-slip surfaces are available in larger-sized tiles as well, which regulations now permit in professional kitchens.

Hytect hygienic surface

Area Pro tiles come with AGROB BUCHTAL's sustainable Hytect technology which make them easy to clean. Dirt and spills are easily removed from these tiles. Hytect protects ceramics from bacteria and mould, and neutralizes pollutants and odours.

Sustainably thin wall tiles

Thinner tiles use less material, require less energy to manufacture and transport, and their lower weight makes them easier to process for tilers. These ultra-thin tiles are ideal for residential use and in hotel bathrooms, for example. In such circumstances, the 6mm-thin earthenware wall tiles offer a sustainable solution which is both efficient and elegant.

Innovation DryLile

The DryLile option is available for floor tiles of the Area Pro series, for most sizes between 30 x 60 cm and 60 x 120 cm. DryLile is an innovative technology where a cork compound is applied on the back of the tiles. Thanks to this compound, tiles can be laid directly on an even surface, without the use of any glue.

Washbasins and shower trays

Area Pro comprises a collection of ceramic washbasins and shower trays which are available in all twelve colors of the series. These elements offer the possibility to design entirely monochromatic environments or to find a balanced harmony between several hues of Area Pro and full visual integration of walls, floors and fixtures.

Ceramic channel cover

For every floor tile which can be applied around pools, AGROB BUCHTAL supplies a special rim product to ensure visual continuity between the pool and its surround: a channel cover with water-cut openings. The Area Pro series comprises this element as well, featuring the appropriate slip-resistance categories (B or C).

Sizes

Area Pro tiles are available in a wide range of formats, from small 5 x 5, 10 x 10 cm and 15 x 15 cm tiles to very large sizes of 60 x 120 cm and 90 x 90 cm.

Area Pro also includes a variety of stair tiles, skirtings and plinths in different dimensions. The variety of dimensions (for a full overview of all the available sizes, see pages 44-64) of tiles and accessories in the Area Pro series encourages and enables creative solutions to achieve an aesthetically distinctive atmosphere for any and every project.

Casual chic, smart comfort

Area Pro exudes an understated sophistication and a refined ease. Whether they are used in a bathroom, on a kitchen floor or around a pool.

The natural colors of the ceramic tiles in the Area Pro series are capable of creating and amplifying the atmosphere of every space. Combining durability with a subdued presence, Area Pro products are expedient and versatile. Their intrinsic functional and aesthetic qualities make the tiles of the Area Pro range the right choice for practically any situation and every project.

The Area Pro series offer up-to-date yet timeless solutions, which works as well in the domestic domain of private homes as they do home-away-from-home setting of hotels. In both residential and hospitality projects Area Pro adds a pleasant look and feel, and contributes to a comfortable ambiance. The tiles are an elegant and stylish backdrop for both everyday routines and special occasions, equally capable of uplifting the ordinary as they are fashioning the unique.

Key

Product standards

Dry-pressed ceram. tiles, DIN EN 14411, Bla group, unglazed (UGL) for floor and wall coverings indoors and outdoors (porcelain stoneware tiles)

Extruded ceram. plates, precision, DIN EN 14411, Alb group, unglazed (UGL) for floor and wall coverings indoors and outdoors (porcelain stoneware tiles)

Dry-pressed ceram. tiles, DIN EN 14411, BIII group, glazed (GL) for wall coverings indoors (earthenware tiles)

Color shade variation

"Color shade variation" describes the color difference between the tiles in a particular color, i.e. the degree of shading. Our products are classified into 4 shading coefficients.

V2 = Medium variation / medium color play

RAL main color and NCS main color

The color play on the surface determines the dominant color in order to shape the surface's overall color impression. The corresponding entries in the RAL and NCS color systems are determined on the basis of this.

Light covering value

This parameter (standard color value Y) describes the brightness of a color compared to an ideally white surface illuminated according to thickness, direction and quality. For an ideal white, the following applies: Y = 100, black: Y = 0, i.e. all incident light is reflected back.
