TRIO: Novelty 2024

# PATCHWORK THAT ALWAYS FINDS ITSELF ANEW

**As in a wonderfully lively patchwork, different surfaces in TRIO come together to form a new, coherent picture again and again. Everything is possible, depending on the combination, simple, minimalist rooms can be planned or striking eye-catchers. That is the DNA of TRIO. With the series, Agrob Buchtal combines three trendsetters of current interior design in a finely coordinated design construction kit.**

Nature, craftsmanship and colour form a design triad above all for the implementation of high-quality mixed-use living concepts and, in their simplicity, meet the zeitgeist of modern living. Thanks to a broad, functional range of formats, the collection is so versatile that it can be used for all surfaces and purposes of modern interior design and can even be used outdoors.

## **Modern Living with Cement Stone Look**

At the centre of TRIO's triad is the floor in a natural cement stone look: clay, natural stone and cement fluidly layered on top of each other and broken up by coloured little stones. In combination with the relieved, matt surface, a balanced, natural look is created that gives real life its stage in restrained tones.

Formats up to 60 x 120 cm are available for the basic tiles, as well as stair tiles and patio tiles and a mosaic. The basic tile for the wall comes in a light, stone-matt 'Silk White' relief with small and larger terrazzo stones that contrast discreetly with the surface colour. The wall decoration can be combined with all floor colours and is a creative link to the decorative terrazzo tile as a further protagonist in TRIO / the TRIO series.

## **Space for terrazzo**

It's nice that the good handcrafted things still exist. Like terrazzo. Its timeless elegance can still be found today in Art Nouveau villas, preferably in the entrance area, bathroom or kitchen, loggia or conservatory. The terrazzo ensemble of the TRIO series mixes up the simple cement stone look of the basic tiles with lively contrasts or blends in close to the colour. The variety of shapes and colours of the small stones creates the striking surface in the characteristic terrazzo colours 'Red', 'Black' and 'Ivory'. The matching wall tile in 30 x 60 or 30 x 90 cm adapts the terrazzo look in a delicate, light 'Beige Mix' variant that looks good in patchwork with all floor colours.

## Colours as striking eyecatchers

In triad with the cement stone and terrazzo look of the TRIO series, the glaze colours in the square 15 x 15 cm small format form a powerful chord. The colour palette consists of a clear white and three expressive, slightly tinted mixed colours with elegant luminosity, which sets warm, cosy accents in modern, open-plan rooms in particular.

The two décor variants - COLOR with a velvety matt plain-coloured glaze and LINES, high-gloss glazed and with a grooved relief that can be experienced visually and haptically - can be laid together or separately - and thanks to their material thickness of 6 mm also side by side with all the other wall tiles in the series - and can cover both small and large areas.

## The result is greater than the sum of all parts

With TRIO, Agrob Buchtal presents a modular design system whose patchwork-like flexibility offers maximum scope for the renovation and redesign of open-plan living and working environments, but also for hotel, gastronomy and retail design. Thanks to the excellent slip-resistant properties and the wide range of formats, different areas of use can be consistently equipped with just one series and continued into the outdoor area.

The antibacterial Hytect® surface finish neutralises air pollutants and contributes to a healthy indoor climate. With a slim 9 mm thickness, the floor tiles of the collection and the wall tiles with a material thickness of only 6 mm meet the highest standards of sustainable building. And not to forget: Centuries of tradition, robustness, durability and naturalness make ceramics one of the most sustainable building materials of all.
